MicroBase™

BIOBUSTER PIT & POND

Managing manure waste can be a demanding part of your live-stock operation. Solids buildup can create significant challenges for storage space and pump-out. That's why Phibro offers natural microbial solutions to support a more painless pump-out, reduced odor and lower ammonia emissions.

MICROBASE™ BIOBUSTER PIT & POND is a proprietary blend of *Bacillus* bacteria and protease and cellulase enzymes used for ongoing manure decomposition to help reduce solids buildup and to preserve storage space in pits, ponds and lagoons.

- Features key microbials to help decompose manure.
- Helps reduce solids buildup.
- Aids in the ease of pump-out.
- Reduces odor and ammonia emissions.
- Easy-to-use, 100% biodegradable applicator.

To learn more about the benefits of using MicroBase BioBuster Pit and Pond, speak with a Phibro expert today.
